1. An eyeglass retainer configured to retain an eyeglass in a desired position on the body of a user, the eyeglass retainer comprising:
 - a cord having a first end and a second end;
 - first means coupled to the first end of the cord for selectively coupling to one of (i) the temple; and (ii) the earpiece of an eyeglass; and
 - second means coupled to the second end of the cord for selectively coupling to one of (i) the temple; and (ii) the earpiece of an eyeglass.
2. An eyeglass retainer as recited in claim 1, wherein the first means for selectively coupling to one of (i) the temple; and (ii) the earpiece of an eyeglass; and the second means for selectively coupling to one of (i) the temple; and (ii) the earpiece of an eyeglass comprise a first and second connector, respectively.
3. An eyeglass retainer as recited in claim 2, wherein each of the first and second connectors has:
 - (i) a hollow chamber configured to receive an eyeglass earpiece therein; and
 - (ii) an expandable opening communicating with the hollow chamber.
4. An eyeglass retainer as recited in claim 1, wherein adhesive connects the first and second ends of the cord to respective first and second connectors.

5. An eyeglass retainer as recited in claim 1, wherein the eyeglass retainer retains an eyeglass on the head of a wearer.

6. An eyeglass retainer as recited in claim 1, wherein the eyeglass retainer suspends an eyeglass from the neck of a wearer.

7. An eyeglass retainer as recited in claim 1, wherein (each connector) is non-integrally connected to its corresponding end of the cord.

8. ~~An eyeglass retainer configured to retain an eyeglass in a desired position on the body of a user, the eyeglass retainer comprising:~~
- ~~a cord having a first end and a second end;~~
 - ~~a first connector coupled to the first end of the cord; and~~
 - ~~a second connector coupled to the second end of the cord, wherein each of the first and second connectors is configured to selectively couple to one of (i) a temple; and (ii) an earpiece of an eyeglass.~~
9. An eyeglass retainer as recited in claim 8, wherein each of the first and second connectors has:
- (i) a hollow chamber configured to receive an eyeglass earpiece therein;
 - and
 - (ii) an expandable opening communicating with the hollow chamber.

10. An eyeglass retainer configured to retain an eyeglass in a desired position on the body of a user, the eyeglass retainer comprising:

a cord having a first end and a second end;

a first connector coupled to the first end of the cord; and

a second connector coupled to the second end of the cord, wherein each of the first and second connectors has:

(i) a hollow chamber configured to receive an eyeglass earpiece therein;

and

(ii) an opening communicating with the hollow chamber, the opening configured such that the eyeglass earpiece can be selectively moved from the chamber through the opening such that the temple of the eyeglass is mounted within the hollow chamber.

11. An eyeglass retainer as recited in claim 10, wherein each opening comprises a hole having a slit adjacent thereto.

12. An eyeglass retainer as recited in claim 11, wherein the slit communicates with the hole, such that the slit expands as an earpiece extends through the hole.

13. An eyeglass retainer as recited in claim 10, wherein the eyeglass retainer is configured such that the retainer connectors selectively grip at least one of: (i) first and second earpieces of an eyeglass; and (ii) first and second temples of an eyeglass.

-

17. An eyeglass retainer configured to retain an eyeglass in a desired position on the body of a user, the eyeglass having an eyeglass frame comprising a first temple, a first earpiece coupled to the first temple, a second temple, and a second earpiece coupled to the temple, the eyeglass retainer comprising:

a cord having a first end and a second end;
a first connector coupled to the first end of the cord; and
a second connector coupled to the second end of the cord, wherein each of the first and second connectors has:

- (i) a tubular wall defining hollow chamber configured to receive an eyeglass earpiece therein; and
 - (ii) an expandable opening extending through the tubular wall.
18. A retainer as recited in claim 17, wherein the expandable opening comprises:
- (A) a hole extending through the tubular wall; and
 - (B) a slit extending through the tubular wall, the slit communicating with the hole such that the slit expands as an earpiece that is larger than the hole extends through the opening.

19. An eyeglass retainer as recited in claim 17, wherein the slit and the hole are in communication with each other.

20. An eyeglass retainer as recited in claim 17, wherein the slit expands as an earpiece that is larger than the hole extends through the opening.
